

Many sources at the state capitol have told us that this man has been seen in recent days, buzzing around the Capitol, with the most astonishing claim (Something to the effect of):

Hawaii's Heart Attack Rates have dropped 25% since the ban

Don
Weisman

American
Heart
Association

If this were true, Chiyome Fukino, Director of the Health Department would have shouted this great news to the heavens at the special informational hearing 1/12/08.

If this were true, the "Artful Dodger" Dr. Andrew Hyland would have lead his entire presentation on this one incredible fact alone, instead of his New York, New York Opera.

If this were even remotely true, Dr. Ho or Dr. Dang or Mr. Don Weisman himself would have made mention of this at the special informational hearing 1/12/08.

Should you see him in the building, please show him this flyer and tell him to give me a call. I want to see the actual collected data that shows any reduction in heart attack rates in the state. According to the HHIC, those complete statistics are not even available at this time. So,
SHOW ME THE DATA MR. WEISMAN!!!

BAN THE BAN!

Numbers don't lie...

Only People do!
